

CLDN4-high sits on IFN / MHC-I, not on CD8

n=234 pre-ICI NSCLC WTS (Koh 2025). CLDN4 vs CD8A is null ($\rho = +0.067$, $p = 0.31$) and is not a claimed extra. Epithelial residual drops IFN-compact to partial $\rho \approx 0.12$ — shown only as the published caveat.
