

BRIDGE ONLY — TACSTD2 & CLDN4 co-occur in the same malignant cells

Concordant-4: median detection ratio vs independence = 1.31 (median ρ = 0.746)

CosMx: median detection ratio = 1.17; median ρ = 0.180; 8/8 $\rho > 0$

DepMap protein: ρ = 0.693 (n=45) $\rightarrow$ rounds to 0.69

Cold niche: CosMx both-high immune frac @10 μ m = 0.033 vs both-low 0.091 (HH<LL in 8/8)

NOT mediation: TACSTD2 $\rightarrow$ CLDN4 $\rightarrow$ immune path is null on CosMx + concordant-4 (PR #718)
