

CPTAC LSCC protein: CLDN4 is immune-inverse; TJ-15 is not

Source PR 289 · methods/cptac_lusc_cldn4_protein/tables/associations.tsv · CLDN4 vs TJ-15 contrast.

CLDN4 protein partial | WES vs ImmuneScore = -0.298 (n=77, p=0.0084). Treatment-naive surgical LSCC. No ICI labels. This is the public protein argument to prioritize CLDN4 inside the TJ story — not the private KD co-culture.
